

JOIN US AT OUR SATELLITE EVENT:

Scaling Child-Centred Reporting and Takedown of Online Child Sexual Abuse

17 November 2026, 3pm (PHT)

VIP West, Manila Marriott Hotel, Newport World Resorts

Conducted in English **IN-PERSON ONLY**

ABOUT THE EVENT

[The Second Global Ministerial Conference on Ending Violence Against Children](#) will be taking place on 18–19 November 2026 in **Manila, Philippines**. In the days preceding the Ministerial Conference, partners have been invited to organize satellite events – elevating the impact, inclusivity and ambition of the Ministerial Conference.

IWF's satellite event will explore how to strengthen global systems for detecting, reporting, and removing online child sexual abuse material (CSAM), with a focus on practical solutions, legal enablers and emerging risks.

Online child sexual exploitation and abuse (CSEA) is shaped by fast-evolving threats, new technologies and entrenched systemic vulnerabilities. Key concerns include **gendered abuse against girls, AI-generated child sexual abuse, and growing risks to older teenagers, especially sexual extortion**.

Panellists will share evidence-based knowledge from global hotlines working to eliminate CSAM from the internet, including from **IWF's first of its kind child-centred reporting platform**, allowing children to self-report unwanted imagery to be removed from the internet, and discuss **the actions that Government's, Hotlines and technology companies must take** to disrupt the spread of child sexual abuse material online.

The event will also highlight **the challenges to effective and holistic prevention and response to online child sexual abuse** by sharing IWF's upcoming snapshot study on harms in end-to-end encrypted environments.

PANELLISTS

Please visit our [registration page](#) for updates on our guest speakers.

SESSION OBJECTIVES

1. **Advocate for Governments worldwide** to create global conditions to allow children to report their own images which can then be removed.
2. **Promote the reporting portals** which help people report CSAM online where no national hotline exists.
3. **Share evidence-based knowledge on trends and threats** to improve global decision making which will help stop the global spread of online CSEA.
4. **Launch IWF's upcoming snapshot study** which will lift the hood on CSEA harms in E2EE environments by providing frontline observations to mobilise momentum for introducing interventions in these spaces.
